1. Figures 1,2a,2b, and 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1,8,13,20,25,32,37,44 are rejected under 35 U.S.C. 102(b) as being anticipated by the admitted prior art (figs. 1,2a,2b,3; pages 2,3).

Regarding claims 1,13,25,37, the admitted prior art discloses an access point (18a) operably coupled to the access terminals (20a,20b) by a plurality of corresponding forward communication links (see fig. 3); means for calculating a scheduling parameter for each of the forward communication links and access terminals as a function of a plurality of operating parameters (fairness index; lines 24-35 of page 2; lines 1-4 of page

Art Unit: 2664

3); and means for scheduling data for transmission to the access terminal having the largest scheduling parameter (lines 5-8 of page 3).

Regarding claims 8,20,33,44, the admitted prior art discloses means for calculating the scheduling parameter for each of the forward communication links and access terminals as a function of one or more weighting factors, a maximum data transmission rate, and an average data transmission rate for the corresponding forward communication link and access terminal (lines 24-35 of page 2; lines 1-4 of page 3).

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 10,22,34,46 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (figs. 1,2a,2b,3; pages 2,3).

The admitted prior art fails to disclose priority of data to be sent to access terminal. However, to use priority in the transmission system is well known in the art. Therefore, it would have been obvious to use priority to make the system more efficient since high priority data can be transmitted prior than the low priority data.

6. Claims 2-7,9,11,12,14-19,21,23,24,26-31,33,35,36,38-43,45,47,48 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Applicant's arguments with respect to claims 1-48 have been considered but are moot in view of the new ground(s) of rejection.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to AJIT G. PATEL whose telephone number is 571-272-3140. The examiner can normally be reached on MONDAY-THURSDAY.
